Desktop utility that integrates with Dropbox or other cloud storage systems, making it easy to share files with friends. Read also our review of SecureDrop, a strong, open source password manager. Sharing files online isn't that easy. Sometimes it's necessary to encrypt the transfer to make sure that no unwanted elements find their way into your files and they also should be able to be restored (unencrypted files are not recoverable). To ensure that files sent via public networks like Skype, Facebook, Gmail or via FTP are safe, you will have to use a strong encryption tool. One such tool is Ensafer, a piece of software that encrypts files as soon as they are sent. What is it? It is a desktop utility that is specifically created to enable end-to-end encryption for files that are shared and synched through cloud storage systems like that offered by Dropbox. It is the first tool to do such a thing and has a lot of demand. How Does it Work? The way that Ensafer works is quite simple. It creates the Ensafer folder on your system, inside which you have to place all the files that you would like to encrypt and share with other people. Once it's installed, it will also add the Ensafer app to your applications menu. The next time you need to share a folder via cloud storage system, open the folder you want to share and drag and drop the files you would like to send. Ensafer will detect the files you're using and encrypt them, and once the transfer is complete, the files will be decrypted. An interesting aspect of Ensafer is that you have the ability to use it as a backup application. This means that you can upload all the files you would like to keep safe into Ensafer's folder. Once you've done that, you can use your data at any time and all of your files will be safe. Setting up and Customizing Ensafer Ensafer is in no way difficult to setup. The only thing you need to do is get your hands on the installation instructions. You will be able to get these on their website. One of the downsides of Ensafer is that you need to have other cloud storage utilities like that offered by Dropbox installed before you can start using it. For instance, the application, which has a lot of features, requires you to first setup the Dropbox app on your PC.

Ensafer is a piece of software that is especially created in order to provide end-to-end encryption for files that are shared and synched through cloud storage systems like that offered by Dropbox. Easy to setup and customize Ensafer is meant to work in tandem with an already installed cloud utility. This means that if you've already installed Dropbox for example, dealing with Ensafer should be a cinch since it relies on the same principles. Once it's installed on your system, it creates the Ensafer folder where you need to place all the files you want to encrypt and sync across multiple devices. Sounds simple and familiar doesn't it? As far as customization goes, there's not much to talk about. Being a purpose oriented tool, it doesn't need to overcomplicate things in any way. Some of the few things that you are able to do is choose the custom Ensafer folder, enable the application to start at the same time as your OS and change the service's password. Secure cloud files with powerful encryption Everything about Ensafer is security and you get that from the first time you want to share a folder with it. Access to folder content is granted only by means of invitation from you and the person who receives it needs to also have Ensafer installed on their computer. This is a requirement that needs to be met because Ensafer uses end-to-end encryption, which means that files are encrypted the moment they are added to the source folder or synced and remain so until the transfer is complete. Ensafer uses 2048-bit RSA keys, 256-bit AES encryption, 2048-bit SSL and more to protect your files and ensures that no one besides you can access them. Fast and reliable cloud encryption To wrap it up, Ensafer is a powerful no-nonsense security tool that you can attach to your cloud based storage system and secure files along with the information they carry in a simple manner.Sign Up for Email Updates In the Act, Margaret Thatcher famously stated that "there is no society, there are only individuals." And it has been striking to the America observers to hear the suggestion that we give up on certain ideals of citizenship in the name of preparing individuals for life in the community. In other words, people are not born out of the community; they become out of the community. If we are to have a strong community, we must do more for our citizens than simply ensure that they
